About Company

T&A Global Trading Company Ltd.

Established: September 2024

Branch Location: Bangkok, Thailand

Parent Company: TODDS Pvt Ltd (established 2018)

T&A Global Trading Company Ltd. (T&AGT), established in September 2024, operates as a branch of TODDS Pvt Ltd, based in Bangkok, Thailand. Specializing in the trade of premium coconut fiber products and organic spices, T&AGT serves clients in the UK, France, Germany, Belgium, the USA, and Australia. The company is at the forefront of sustainable, eco-friendly trade, offering biodegradable and zero-waste products to global consumers.

Vision

To lead the global market in providing eco-friendly consumer products that contribute to a more sustainable and responsible future.

Mission

To introduce sustainable coconut fiber and organic spice products into households worldwide, encouraging eco-conscious living and responsible consumption.

“Let's build a sustainable world.”

Core Products and Services

01 Coconut Fiber Products

Supplying eco-friendly coconut fiber products, including mats, ropes, brushes, and biodegradable packaging solutions. These products are recognized for their durability, sustainability, and versatility.

02 Organic Spices

Offering a premium range of organic spices that are ethically sourced, ensuring the highest standards of quality, freshness, and sustainability.

03 Sustainable Products

Distributing natural, biodegradable, and zero-waste products to promote eco-friendly lifestyles worldwide.

04 Distribution Solutions

Providing efficient logistics and distribution services that ensure timely and sustainable product delivery.

05 Innovation & Startup Consulting

Offering expert guidance to startups focused on sustainability and innovative business models.

06 Route-to-Market Strategies

Developing tailored strategies to successfully distribute products into key international markets.

Sustainability Focus

T&A Global Trading is deeply committed to sustainability and community building. The company sources raw materials from community-based households, ensuring ethical, responsible trade while supporting local economies. All products align with a commitment to eco-friendly practices and reducing environmental impact.

Aduna's Great Green Wall collaboration bears fruit

ADUNA's pilot partnership with the African Union-led Great Green Wall has achieved some significant results as it strives to build a global value chain for baobab in rural Africa.

The Great Green Wall initiative undertakes to build and preserve an 8,000km wall of trees across the African Sahel to regenerate land, create jobs and food security and prevent migration.

This pilot tie-up has expanded Aduna's existing baobab fruit value chain in Ghana and Burkina Faso, increased the capacity of its processing centre and implemented a land restoration programme. So far, this has created sustainable baobab livelihoods for 1,823 women from 44 communities, and transformed the lives of 13,080 of their dependents.

"Over the past five years, baobab has risen from obscurity to one of the world's best-selling superfoods," says Aduna CEO Andrew Hunt. "We are delighted to have joined forces with the African Union and the Great Green Wall to scale up our baobab supply chain and kick-start the creation of a new billion-dollar baobab industry for rural Africa."

Elvis Tangem, Great Green Wall coordinator at the African Union, adds: "Our partnership with Aduna is a pilot which demonstrates how an entirely new value chain can be created from village to shelf based on an indigenous tree crop. The outcome is a blend of food, revenue and income generation."

TODDS aims to scrub up well in UK market

TODDS has introduced its environmentally friendly, natural coconut scourers to the UK market to offer a competitively priced plastic-free alternative.

Made in Sri Lanka, these household essentials are produced using coir, a natural fibre extracted from between the hard internal shell and the outer husk of coconuts. After being removed using steel combs, the coir is cleaned and straightened, then washed and dried.

The brand says that the product is more hygienic than synthetic sponges and the fibres are naturally non-scratch so can be used on multiple surfaces. The handcrafted scourers are naturally porous so they retain less water and are quick-drying. Each one can be used for up to six weeks.

The 100% biodegradable scourers are bonded with natural plant latex, and at the end of their life cycle they can be repurposed in flowerpots or garden beds.

TODDS offers employment to local villagers in Sri Lanka, with all employees receiving a living wage above the Government-set minimum. Employees are also given access to a provident fund they can use at times of need or emergency.

NEWS IN BRIEF

The Bay Tree's new egg- and lactose-free vegan condiments comprise: Vegan Tartare Sauce, Vegan Hollandaise, Smashed Mayo and classic Vegan Mayonnaise.

Suma's new green EcoLabel packaging sees its bottles now in 100% post-consumer recycled packaging and all its paper products wrapped in paper.

That Protein's Blisful Race Cacao Organic Super Protein is the first UK protein powder to be certified low-FOGMAP.

Minor Figures has launched its first non-coffee RTD – a fragrant Chai Latte – a nitro infused spiced black tea, slow brewed and combined with its signature oat milk.

Prodigy has launched plant-based, refined sugar-free alternatives to two chocolate classics in the form of Coconut Carrots and Peanut & Caramel Carrots.

Munchy Seeds has extended its savoury snack pack range, introducing a new Mild Chilli flavour – a combination of roasted seeds with chipotle and chili.

Fairtrade company Divine Chocolate has announced its latest B Corp rating has risen from 102 to 127.

Plant So Free's new three-strong range of dairy-free Cocoa Bites in jars come in Milky Smooth, Vegan White and Vegan Dark.

Calm has released a range of cold brew coffee drinks infused with 10mg of CBD per can in two flavours: Americano and Caffe Latte, which uses gluten-free oat milk.

Clearspring adds to Japanese condiment line

NEW FROM natural and organic food brand Clearspring comes a new authentic Japanese seasoning: Organic Yuzu Ponzu.

Available in a 150ml bottle, Clearspring Yuzu Ponzu is made with the juice of Japanese yuzu – a citrus fruit which is described as having a complex flavour profile of lime, lemon, grapefruit and mandarin. The product marries this with the savoury-sweet flavour of naturally brewed

soy sauce, sweet mirin and rice vinegar.

Although ponzu usually contains fish stock, Clearspring has replaced it with umami-rich kombu seaweed to make a vegan product that can be used as a condiment, drizzled across salads, as an ingredient in dressings and marinades or as a dipping sauce.

"Our Organic Yuzu Ponzu has been some time in the making," explains Clearspring director Maria Daw-

son. "We wanted to ensure we captured the authentic taste of Japanese Ponzu, whilst making it plant-based and accessible to all."

BetterYou unveils new nutritional spray trio

BETTERYOU has introduced three new products to its range – Iron 10, Folic Acid and B-complex – taking its total number of nutritional oral spray supplements to 17.

Gentle on the digestive system, Iron 10 Oral Spray delivers 10mg of iron directly into the bloodstream, providing fast, effective iron absorption.

The sugar-free formula utilizes two naturally derived sources of iron – ferric EDTA and ferric ammonium citrate – to improve bioavailability. Folic Acid Oral Spray contains a biologically

active form of folate (methyl-folate), which the brand says provides a superior alternative to folic acid in a convenient spray. Methyl-folate is useful for people with folate metabolism disorders and, unlike the synthetic form, also ensures

there is no unmetabolized folic acid circulating in the body.

B-complex Oral Spray provides a blend of thiamine (B1), riboflavin (B2), niacin (B3), pantothenic acid (B5), pyridoxine (B6), biotin (B7), folic acid (B9) and vitamin B12

to support the body's natural energy metabolism and help reduce tiredness and fatigue.

The B-complex Oral Spray delivers nutrients directly to the bloodstream, contributing to the normal function of the immune system and normal mental performance.

Back to the good old coconut husk to clean pots and pans

In our new fortnightly series, Tera Jayewardene looks at eco-friendly local alternatives to common products

Plastic is so ingrained in our daily lives, that it is something that we actively have to wean ourselves off. Take the humble dish sponge that you use every day.

Creator of TODDS Handmade Coir Sponges Denham Todd has an eco-friendly substitute in his coconut husk sponge.

Regular kitchen sponges made of synthetic foamed polyurethane plastic cannot be recycled or composted. In addition, the bacteria-killing triclosan that they're infused with negatively impacts aquatic ecosystems.

Upon learning that synthetic sponges contaminate groundwater and can take up to 50,000 years to deteriorate, Denham was inspired to create a replacement. As a senior Consultant at Eco Lanka Consultants, he handles issues related to coir at the Intercoir factory, and it made him realise that coir was a good alternative. "Back in the day our grandparents used coconut husk, so why can't we use it today?" Denham asks.

TODDS was created after observing the market and noticing that there were no non-synthetic sponges. TODDS' handmade coir
